

Troubleshooting

Container Communication Troubleshooting:

- <https://github.com/siemens/ghostwire>
 - Allows for Wireshark to intercept the communication between containers to further troubleshoot network connectivity issues

Logs to check:

- In backend/syslogs is an accounts.log file with account related information
 - Useful for troubleshooting account lockouts, auditing accounts and failed sign ins.
- Backend/debug.log contains SQL queries that have been sent to the database
 - Useful for tracking down unexpected data returned by queries
